

Release Notes

Date: October 2010
Product: Emulex Drivers for Windows
Version: FC and FCoE version 2.40.005
NIC version 2.103.269.3
iSCSI version 2.103.269.0

This document describes the known issues associated with the Emulex drivers for Windows. For the latest product documentation, go to www.emulex.com. If you have any questions or require additional information, contact an authorized Emulex technical representative.

New Features in the Drivers for Windows

There are no new features in this release.

Resolved Issues in the Drivers for Windows

No issues have been resolved in this release.

Known Issues in the Drivers for Windows

- You cannot install only the OneCommand Manager application without installing the drivers.**
When you run AutoPilot Installer silently from a command line using the configuration parameter "SkipDriverInstall" to install only the OneCommand Manager application, the Autopilot Installer fails as "SkipDriverInstall" is not valid and you are prompted to restart the Autopilot Installer.

Workaround: To install only the OneCommand Manager application and not the drivers:

 - Run the full driver package installer and choose the Create AutoPilot Installer Kits option. Then do one of the following:
To install the full utility set (including the OneCommand Manager application GUI):
 - Run SetupCommon.exe
 - Run Setup.exeTo install the core utility set:
 - Run setupCLI.exe
- If you install a driver for one protocol, you automatically install new drivers for all protocols.**
Any previously installed drivers (including FC) will be overwritten. This is true during manual installs and automated default installs.

Workaround: For automated installs, if you want to prevent software-first driver installation you may use the "NoSoftwareFirstInstalls" configuration parameter. This will only install the drivers whose protocols are supported by the Emulex adapters present in the system.
- While up to 128 targets can be found on an iSCSI port, only a maximum of 64 targets can be discovered using the Add Portal option in the iSCSI Target Discovery dialog box.**

Workaround: Targets can be added manually or discovered through iSNS.
- If you currently use a SCSIport Miniport or FC Port driver, the driver will be replaced when you install the Emulex Storport Miniport FC driver.**
The FC driver will be installed for all HBAs on the server. You will also lose your customized driver parameters, persistent bindings, LUN masking and LUN mapping. The default parameters set with AutoPilot Installer will usually be the best options.

Workaround: Note your current settings before you install the Emulex FC driver. After the installation, you can then update your customized driver parameters.

5. **In the *Emulex Drivers for Windows User Manual*, Table 25: NIC/TOE Event Log Entries, Message Id 0x0022 should be identified as a Warning, not as an Error.**
